

SUPPLIES FOR GOAT PRODUCERS

Keep in mind that most of these products are off label for goats, but work effectively to prevent or treat.

Drench gun: I recommend the Ideal 50cc Megashot syringe with the glass barrel: get the drench tip too, it can be used for drenching wormer, medication, or probiotics.

Wormers: Cydectin (cattle pour on to be given orally at 2cc/20 lbs body weight) or Cydectin injectable at 2cc/100lbs oral.

Ivomec cattle injectable 2cc/100lbs orally

Synanthic cattle drench: 2.5cc/100 lbs is label, it is best if double or triple dosed to kill tape worms.

Delousers: I use Cylence cattle pour on in a stripe down the top line: kids 2cc, 50-100lbs 4cc, and over 100lbs 6cc. Very large bucks 8cc.

Vaccines: I use Covexin 8 for the Clostridial diseases. 3cc SQ first dose, and 2cc Sq in 21 days, then once annually

Calvary 9 is a 9 way Clostridial. I use a 1cc SQ dose with a booster in 21 days. Booster Pregnant does 3 weeks or so prior to the earliest time a kid could be born.

Super Poly Bac B Somnus for pneumonia prevention: This is a cattle vaccine, and is a 1cc dose SQ for goats, repeat in 14-21 days. It works wonders to protect against *Pasturella hemolytica*, *Multocida*, and A6, *Haemophilus Somnus*, and *Samonella*.

CL vaccine: There are two types. The Casebac from Colorado Serum Co., the autogenous from various laboratories. The one I use is from Novardis (used to be Grand labs). This vaccine should always be given SQ.

Soremouth: I use the one from the Texas A&M Experiment Station in Sonora, Texas. They add new variants to it all the time, when break over occurs, and thus this is a very good vaccine.

Drugs to have on hand for emergencies:

Some of these drugs are available through your veterinarian only.

Long acting Penicillin: OTC

Banamine: RX- smooth muscle relaxant, helps with pain, fever, respiratory distress, it is anti-prostaglandin (helps prevent loss of pregnancy due to injury or stress) antiendotoxin (helps to prevent organ damage due to toxins produced by infectious organisms)

Nuflor: RX.: Drug of choice for pneumonia. 6cc SQ/100 lbs loading dose, followed by 3cc/100lbs SQ per day for 4 days minimum. Cattle regime does not work well on goats. They relapse and die.

Vitamins:

Thiamin: Vitamin B1, Rx, used to treat and prevent Polio. Any infection can precipitate death of rumen and small intestine organisms that produce all B complex vitamins. Pathogenic organism overgrowth can occur precipitating polio. I prefer the 500 mg/ml Thiamin injectable.

Vitamin B12 Cyanocobalamin: used to treat anemia, appetite stimulant
B Complex vitamins: Used for stress and appetite loss due to illness
Vitamin AD&E injectable- Used to combat deficiency due to drought. Goats
Do not carry a pregnancy well, lactate well, and tend to have retained
placentas when there is vit. A deficiency. Alfalfa can be supplemented to
augment the condition, but often ADE injection 2cc IM or SQ will
speed up the process. The usual source of vitamin A is green forage.
free choice mineral should be available at all times with a 2:1 Calcium
Phosphorous balance. Mineral should contain all trace minerals available.
Selenium deficiency: Selenium products: Rx, MuSE, BoSE
Polyserum: OTC This is antibodies to Actinomyces Pyogenes, P.
Hemolytica, P. multocida, Salmonella, and E Coli.: Passive immunity to
these diseases during illness or injury.

CD antitoxin- Treatment for Enterotoxemia types C&D

Tetanus antitoxin: Used to prevent Tetanus in wounded, castrated, or
dehorned animals.

Pepto Bismol-Antacid, anti-gas, antibacterial: used to treat bloat which is
usually Enterotoxemia. It is also used in scours to help prevent
dehydration.

7% Iodine-treat, disinfect wounds

Scarlet oil-antibacterial, keeps flies off wounds

Furacin ointment- to dip eartags in to prevent infection at application.

Wound Kote-Wound spray that seals wounds to moisture and
contamination.

Listerine: used to clean skin for injection, to clean eyes of pus from
Pinkeye. Used as general disinfectant, much better than alcohol.

Vet Wrap: used to cover wounds

3cc syringes

12cc syringes

18 gauge needles 1/2" or 3/4" long

20 gauge needles 1/2" or 3/8" inches long

feeding tube

60cc syringe with irrigation tip

50% Dextrose-OTC for use in pregnancy toxemia and to make Revive
Amino Acid Solution (not the concentrate) OTC ingredient in Revive
Cal-Dex: A dextrose product with calcium used in preg. Toxemia, or
milk fever.

Calf Pac-live probiotic product in powder form, that has 5 live organisms
and will keep without refrigeration.

This is a list of products and drugs that I use to treat illness and injury. These are things
that work for me. Coni Ross
